

Job opportunities at Fathom

Our team is always on the lookout for strong candidates with top-flight academic training and an excellent understanding of the relationship between the macro economy, financial markets and politics. If you are interested in joining us, please submit your curriculum vitae and a cover letter using the [Careers enquiries form](#) on our website.

In addition, we are urgently looking to fill the following specific vacancies:

Economist

We are looking to appoint a graduate economist who is keen to test their academic skills in the real world. The ideal candidate would have proven quantitative skills, and would be completing their studies this year, either in economics or in a related discipline, such as finance or politics. A postgraduate qualification would be a bonus, as would relevant work experience, for example on an industrial placement year, but neither are essential. To find out more, please contact careers@fathom-consulting.com.

Data visualisation specialist

We are urgently seeking a person with strong data visualisation skills with experience in Tableau and R (ggplot2, and/or shiny) and/or other visualisation software. In addition, familiarity with programming skills in either R or Python, a quantitative mindset, and a keen interest in finance and economics gained through professional experience, academic studies or a demonstrable personal interest, is required. The role would suit someone who has a flair for finding creative ways to visualise complex data. The data visualisation specialist would be responsible for creating content for our regular research offering as well as our bespoke consultancy projects. A few years' experience and a good degree in a relevant subject are also required. To find out more, please contact careers@fathom-consulting.com.
