

Installing Tableau Reader and downloading data

1. Installing Tableau Reader

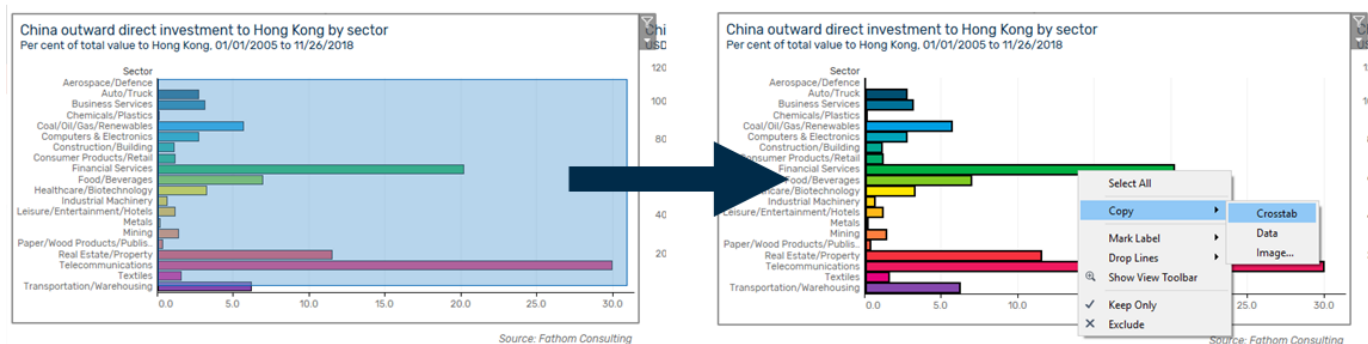

To view the Tableau dashboard, users must have Tableau Reader installed on their computer. This is available to download from Tableau's website.

You can download the latest version of Tableau Reader by clicking [here](https://www.tableau.com/en-gb/products/reader) or by pasting this link into your web browser: <https://www.tableau.com/en-gb/products/reader>.

Once Tableau Reader is downloaded, you can download the dashboard from Fathom's website and open it like any other file.

2. Downloading data from charts in Tableau Reader

It is also possible to download the data underlying each chart, table and visualization from within the dashboard. To do this, first the user must highlight the data they are interested in downloading. Second, right click on the selected data and choose **Copy > Crosstab**. This data can now be pasted into an Excel workbook.
