

Fathom's Energy Transition Scores

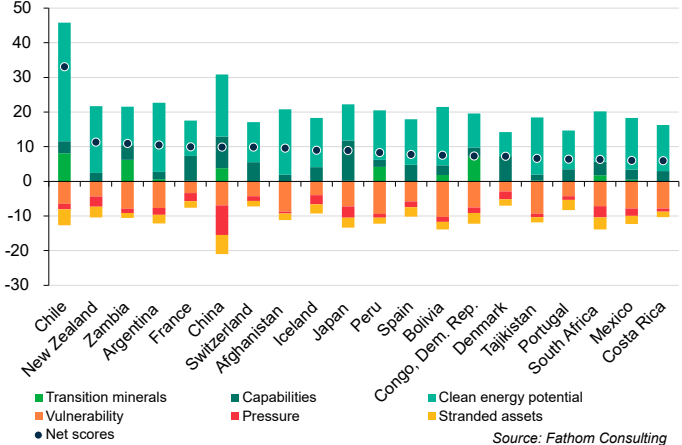

Fathom's Energy Transition Scores quantify the winners and losers by country of the transition to net-zero emissions.

Scores at a glance

-  **186 countries**
-  **198 transition-related economic variables**
-  **Scores sorted into opportunities and risks**
-  **Historical scores: 2013, 2018 and 2023**
Projected scores: 2030, 2040 and 2050

Energy transition winners

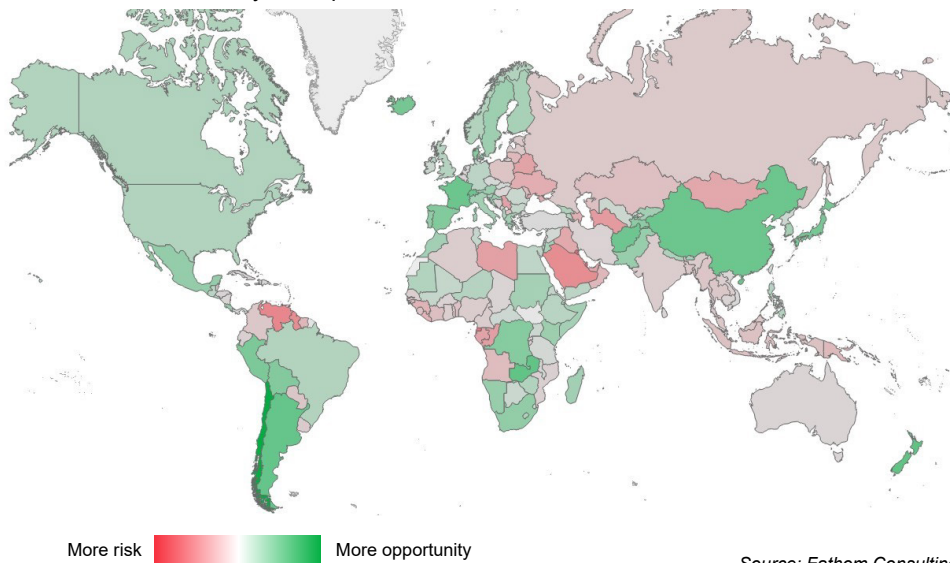

Net scores, 2023, without ability to respond

The scores are a comprehensive new dataset of transition-related economic information, which clients can view and download via a user-friendly dashboard. The data can be broken down into categories and sub-categories for a nuanced picture. Policymakers can use the scores to set policy; investors and corporates use them to identify risks and opportunities, and to align investments with ESG factors. Fathom brings the data to life through in-depth analysis, reports and presentations.
